Jewers Doors to supply Esavian doors for huge HABOM aircraft maintenance project in Turkey

Turkish Technic is establishing a new international maintenance, repair and overhaul centre within Istanbul's Sabiha Gökçen International Airport under the title the HABOM Project (Havacılık Bakım Onarım ve Modifikasyon Merkezi – in International English: Aviation Maintenance, Repair and Overhaul Center).

Two new hangars are to be built – one for servicing narrow body aircraft, the other for wide body aircraft. Jewers Doors will design, supply and install its world-renowned Esavian Type 126 hangar doors on each of the hangars. The openings are approximately (narrow body hangar) 254 metres wide by 14 metres high and (wide body hangar) 226 metres wide by 22 metres high.

Esavian hangar doors feature state-of-the-art controls and are fitted to the majority of super hangars built for maintenance of A380 aircraft. They are also in service on hangars of all sizes with major airlines, MROs, FBOs, royal families and armed forces worldwide.

The stated aim of the HABOM project is that all facilities will be constructed as 'environmentally friendly designs which will provide maximum energy savings.' An unlimited choice of cladding materials is available for use with Esavian doors enabling them to be highly insulated, secure and translucent. They conform to the tough Leadership in Energy & Environmental Design (LEED) internationally recognized green building certification system, are the 'greenest' doors available and therefore the most suitable for harsh environments.

Jewers Doors recently completed the refurbishment of doors on a two-bay narrow-body aircraft hangar for Turkish Technic at its existing maintenance, repair and overhaul facilities at Istanbul Ataturk International Airport.

Managing director, Chris Jewers, says: "The HABOM project is likely to establish Istanbul as the aircraft maintenance hub for the region and we are very pleased to be part of it. Our unrivalled experience of designing environmentally-friendly hangar doors of any size, anywhere in the world, has once again secured Jewers Doors a major contract."

Notes for editors:

From modest beginnings 28 years ago, Jewers Doors now undertakes contracts throughout the world for governments, armed forces and private companies.

Jewers Doors doors are installed in Abu Dhabi, Australia, Azerbaijan, Bahrain, Brunei, Chile, China, Dubai, Egypt, Greece, Hong Kong, Kuwait, Macau, New Zealand, Oman, Qatar, Spain, Sudan, Taiwan, Tanzania, Thailand, Turkey, Turkmenistan and the United Kingdom.

Jewers Doors designs, manufactures and installs aircraft hangar doors under its Esavian trade name and in recent years has supplied the overwhelming majority of all doors for the new super hangars for A380 aircraft.

Industrial doors are marketed with the Phoenix brand name and are ideal for a wide range of applications including fire stations, railway sheds and light aircraft and helicopter hangars.

ENDS.
