December 2011

## **Metalite LED products proving popular with customers worldwide.**

Since our prototype launch at ATC Global back in March 2011, Metalite has completed sales of the new LED portfolio of portable airfield lighting products to Colombia, Norway, Italy, Mauritania and the Antarctic. The new products will be used in the harshest environments throughout the world, now with the efficiency, runtime and optical benefits that the unique LED light engine technology delivers to the runway and its operators.

**Rob White, Metalite Technical Sales Manager, has no doubt that the new products will continue to sell in large volumes.**

"As LED technologies have evolved we are proud to bring our already market leading halogen products into a new technological era with our state of the art Light Engine Technology. Our products boast extensive runtimes, low maintenance and efficiency that is second to none, all at a price point that we have been able to sustain in line with our legacy halogen products. Our customers are all keen to see the new lights in action and we are working on a programme in line with our agent network around the world to deliver demonstration products for live use and photometric testing where required".

The Metalite portfolio of new civilian LED products can be found [here](#).

## **New Military Solutions Launched**

We also successfully launched our new Military solutions at London's DSEi in September, creating a huge amount of interest around the world.

You can view our new Military product video on YouTube [here](#).

## Our new MOSKIT AT LED on show at DSEi London 2011

The all new MOSKIT AT LED generated a huge amount of interest at DSEi London this year. We were visited by Armed forces from across the globe, looking to utilise the newly developed LED based airfield lighting solution to enhance their expeditionary requirements. Brian Hunt, Business Manager for Metalite explains "Having supplied our halogen based MOSKIT since the early 1990's around the world, when it came to a redesign to incorporate LED light engine technologies we listened to the individuals using the solution in the field and ensured we included these improvements in the new products. Issues such as deployment time have been reduced with an off-road trailer capable of much higher towing speeds, low maintenance features are now included such as drop in charging and snap on components that minimise the overall management and maintenance requirements of the trailer and its contents. Naturally the new LED technology in both the PAPIs and ORELs ensure unparalleled battery life runtimes between 8 hour charges. We were delighted with the feedback we received from all that came to see us at the show."

MOSKIT AT LED is now available to order for delivery in 2012.

Should you have any projects on the horizon for which our products would benefit your organisation, we would be delighted to discuss your requirements with you.

The Metalite Team.
