MALMS User Group Meeting at Dubai Airport

On 17th-18th of January a MALMS User Group meeting was held at Al Bustan Rotana Hotel in Dubai. This event was co-hosted by Dubai Airports, Tailor Made Systems Ltd (TMS) and their U.A.E. representative Bayanat Airports Engineering and Supplies. It is the first MALMS User Group workshop in the GCC region and enabled the user community to learn how Dubai Airports operate and maintains Airfield Ground Lighting (AGL).

“Dubai Airports believes in adopting smart technology through partnerships with top industry providers to enhance performance. Our long lasting relationship with Tailor Made Systems Ltd is an example of our commitment to airfield safety”

Over 40 international participants

The workshop brought together approximately 40 participants consisting of MALMS user community members, AGL manufacturers, Airports and regulators from the Gulf region as well as neighbouring regions with representatives from Delhi Airport, India. From the regulatory side participants from GCAA attended the workshop and Ms Paula Laws, Senior Aerodrome Inspector at GCAA presented their view on AGL maintenance. Paula was impressed by the initiative to hold the first MALMS User Group workshop in the G.C.C. region.

- *The GCAA support the gathering of specialists from across the UAE and the Gulf Region. The workshop provided the opportunity to share developments in mobile photometric units with industry and aerodrome operators. This first event in the UAE also gave specialists the opportunity to discuss regulations, maintenance systems and the chance to observe demonstrations hosted by Dubai Airports, said Ms Paula Law during the workshop.*

Airside Demonstrations at Dubai Airport

As co-host Dubai Airports gave the participants a rare chance to see a demonstration of how they operate within the Airside domain of the airport. By facilitating the MALMS User Group demo day on the 18th of January the community was given a rare opportunity to see the existing MALMS equipment used by Dubai Airports in addition to the latest equipment from TMS, i.e. their MALMS Transverse System, AGL Cleaner and Torque System.

- *MALMS products and services have been developed using the experience of measuring and monitoring airfield lighting since 1991. Since this time Dubai Airport has grown to be a Global Aviation Hub with one of the world's finest airfield lighting maintenance departments. Dubai and many other airports in the region have been quick to adopt MALMS photometric test equipment to maintain their lights in compliance with airport regulations per GCAA CAR Part IX and ICAO Annex 14.*
- *TMS are extremely proud to co-host this event and present our latest products. It was a great opportunity to show how MALMS can help improve safety and efficiency in the airfield lighting industry and solicit feedback and ideas to feed our policy of continual development, says TMS Chief Executive Officer Robert Shapton.*
